

# HEAD-TO-BRAIN: REPLICATION

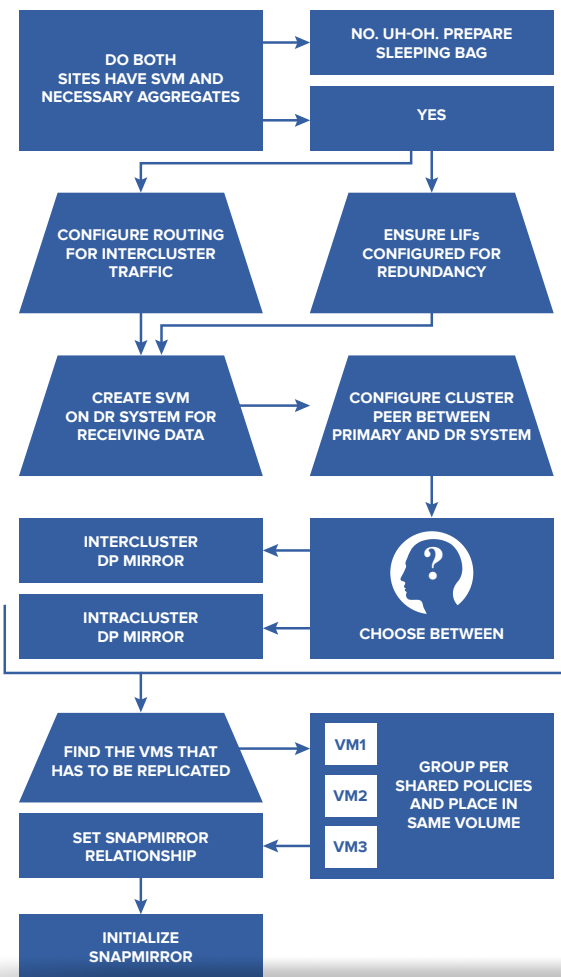

Conventional storage has a big head, whereas Tintri has a big brain. Tintri lets you replicate individual VMs instead of bulky LUNs. That saves you time and up to 95% of your WAN bandwidth. Now that's smart storage.

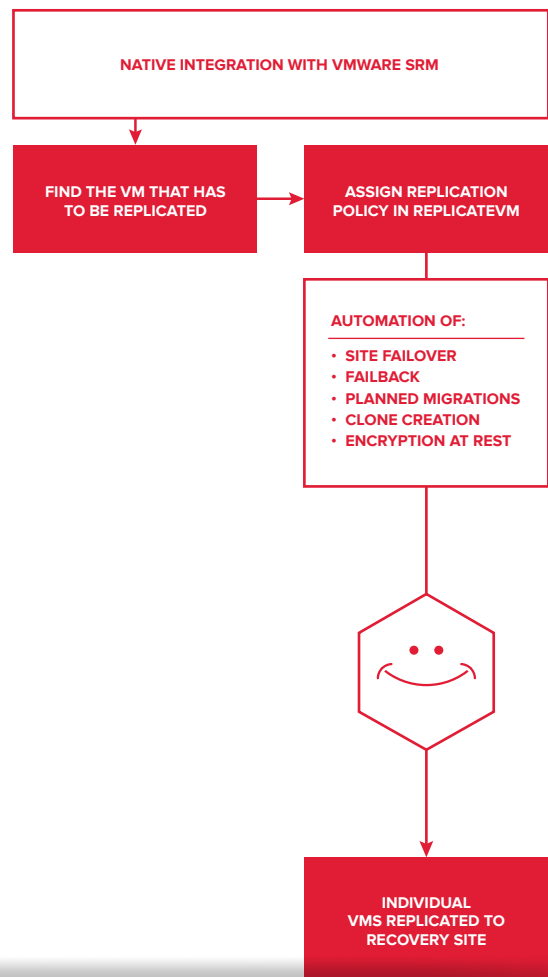

*"I've never seen per-VM replication functionality on any other storage I have used. With Tintri, we don't have to re-engineer our virtual infrastructure to make replication work efficiently."*

## CONVENTIONAL STORAGE
