

PeerStory: Tintri VMstore

This PeerStory is a collection of quotes from a real user sharing their experience using Tintri VMstore on PeerSpot.

Sales Team Lead
at Axelliant

Use Case

We primarily use Tintri VMstore solution for our VM database storage needs. Previously we used IBM flash storage services. However, it had significant drawbacks. So, we switched to Tintri VMstore solution, and it met all our storage needs and more.

Valuable Features

The SecureVM feature of Tintri VMstore **encrypts all data going through it with zero impact on performance** or output and can be managed using the VMStore dashboard. This adds an additional layer of security to the organization's infrastructure and is a valuable additional feature

“Tintri VMstore solution brought a very positive change and impact on our day-to-day operations.”

“Overall, using Tintri VMstore solution, compared to the previously used alternatives, has given us far better output and services, and support.”

Results

The extra layer of security it provides is also very valuable for our organization. We use 24 VMs in our environment currently, and our customer database contains sensitive information. With the help of Tintri VMstore solution, we are also on the right path for future expansions. With all our physical and virtual infrastructure, the Tintri VMstore solution has been very helpful in managing our needs and provides easy integrations and extra layers of security.
